

HULK SYSTEMS

HUTTERITE COMMUNITY TESTIMONIALS

PROJECTS BUILT TO LAST 100 YEARS

Here's what the industry's hardest critics on products are saying about Hulk Systems

"We probably wouldn't have even considered using ICF if it wasn't for Hulk Systems. It eliminates all the concerns and fears we had using the ICF materials, like tearing, leaking, and stick-on sheet membranes pulling away or not sticking in our colony's high wind conditions."

- **Carpentry Boss of Britestone Colony**

"Peel and stick membranes are a nightmare in the wind or if there's any moisture. By the time we get half way, half of it is peeling off even with the primer, so we end up needing to install OSB sheathing in front of it. With Hulk, we installed 6,000 feet in a single day, and the stuff seems bulletproof and it's not going anywhere."

- **Carpentry Boss of Fairlane Colony**

"The fact we could use the same system above ground meant we could protect behind our siding much better than we could with Tyvek or home wrap with tapes, which we lose most of by the time the siding arrives because of the wind. The Hulk System above grade is the best solution even on OSB or plywood that we have come across by far."

- **Carpentry Boss of Haven Colony**
