

HULK SYSTEMS

ICF **BLOCK SYSTEM**

Fully protect your ICF with a single seamless system in 3 easy steps, rather than requiring layer upon layer of primers, membranes, peel n' stick, drainage wrap, and protective board products. From the footing up, the monolithic Hulk ICF Block Systems leaves no seams, or joints where water can get behind the system.

REINFORCE **YOUR FOAM**

The problem with traditional peel n' stick membrane products, is you can puncture them all extremely easily, and they are significantly compromised during back-filling. So much so, that the damaged lengths can create chambers that hold trapped water rather than protect against it. Hulk not only adds an incredible amount of impact and abrasion resistance to your ICF, but it also creates an ultra-durable shell of protection that keeps water out of your block and away from your concrete.
