PROPER WATERPROOFING YOUR NEW HOME SHOULD BE PRIORITY #1

HULK SYSTEMS

"A major complaint among home owners is the musty smell, dampness and water damage that are signs of a wet basement or crawl space. In this country 60 percent of all houses suffer below ground wetness. Within the first 20 years there is an 80 to 90 percent chance of leakage within block foundations. It is very common to have 2 cracks in new concrete basement construction. This is easily repaired from the exterior."

- Canadian Home Inspection Services

Hulk Systems' UV-stable and abrasion-resistant waterproofing solutions provide long-lasting protection that can save you thousands of dollars in future expenses. Even if foundation cracks occur, we have systems that prevent water ingress and don't require fastener penetrations or seams.
